PROFESSIONAL SUMMARY

Recently graduated Electrical Engineer (MS) with special experience in PCB design and hardware integration. I enjoy working with cross-functional teams in the life sciences industry to build and troubleshoot systems that keep automated machinery operating for long periods of time.

TECHNICAL SKILLS

- **Design & Simulation:** Altium 365, SolidWorks, MATLAB, LTspice, Multisim, Diptrace, CST Studio
- **Hardware** Arduino, Raspberry Pi, PCB Troubleshooting, Oscilloscope, Function Generator, Soldering
- **Software:** I2C, SPI, Winprep, Oracle Agile PLM, MS Visio, MPLAB IPE (.hex binary)
- **Languages:** C++, Python (Matplotlib), Fluent in English

PROFESSIONAL EXPERIENCE

Electrical Engineering Intern/Co-op | Revvity, Hopkinton, MA | May 2024 – Sep 2024

- Improved hardware by designing and modifying PCBs for Janus/Fontus liquid handling systems, ensuring connections with current mechanical and software architectures.
- Improved product development by teaming up with the Mechanical, Software, and Quality groups to successfully build and run a Janus machine within certain timelines.
- Streamlined manufacturing workflows by creating Bills of Materials (BOM), detailed test reports, and fabrication files within certain dates and meeting times.
- Strengthened documentation by using Visio to map complicated PCB connection diagrams, significantly reducing troubleshooting time for field technicians.
- Managed lifecycle updates for machine components, which includes replacing and working on firmware programming (.hex) of Peripump control boards.

Circuits II Lab Assistant | University of Massachusetts Lowell | Aug 2024 – Dec 2024

- Mentored 30+ students in a circuit laboratory, providing information and assistance on the use of high-voltage machines and signal analysis equipment.

Crew Member | Dunkin' Donuts, Somerville, MA (Nov 2020 - Present)

- Provided customer service, processed transactions, and maintained an efficient work environment.

ENGINEERING PROJECTS

- **Lighted Wall Panel (Capstone):** Developed a 48-cell interactive panel using an Arduino-controlled custom PCB designed in Altium.
- **Digital Measuring Cup:** Developed an automated liquid level indicator with real-time LED/buzzer alerts using ultrasonic sensors and custom logic.
- **Electromagnetics Stub Matching:** Conducted high-frequency analysis using Smith Charts and CST Studio to build double stub matching for impedance optimization.

EDUCATION

Master of Science in Electrical Engineering | UMass Lowell | Fall 2025 (Graduated)

- **GPA: 4.0** | Focus: Power Systems, Gen AI, Printed Electronics, Quantum Electronics

Bachelor of Science in Electrical Engineering | UMass Lowell | Fall 2024 (Graduated)

- **GPA: 3.75** | Honors College, Dean's List, Eta Kappa Nu (HKN) Honor Society

Somerville High School, Somerville, MA (Graduated May 2021)

- **GPA: 4.4** | Focus: Mathematics & Science Engineering

CERTIFICATIONS

- IEEE - Eta Kappa Nu Certification (2024) | Real Estate Salesperson's License (2023)
